

# NetShield\* for NetWare Servers

## Complete Virus and Malicious Code Protection at the Server

Detecting and removing a virus at the server level reduces an organizations operating costs by allowing help desk personnel to concentrate on assisting employees with daily work tasks, as opposed to fighting a virus outbreak. The cost of cleaning a virus infection at the network server level can be staggering. Infected server files raise the ante on virus infections, rapidly expanding a desktop infection into a network-wide virus outbreak. The additional cost of lost employee productivity and potential loss of data makes server-based virus protection a must.

Network Associates' award-winning NetShield provides an essential layer of anti-virus protection for both Novell NetWare and Windows NT servers. NetShield for NetWare consists of a 32-bit Windows-based management console and a series of NetWare Loadable Modules (NLMS).

*Remotely install and manage NetShield on any Windows NT or Novell NetWare server on your network*

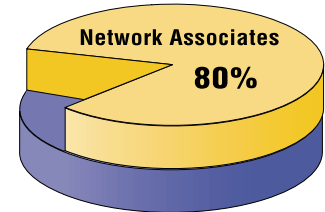

### Powerful Remote Manageability

NetShield's powerful central management console gives you complete control over all protected NetWare servers from either the server or a Windows 95, 98 or NT workstation. No more trips to the server room to check on the status of virus activities or change a system setting. With NetShield, all monitoring and configuration functions enterprise-wide can be performed from the convenience of a single console. NetShield also empowers you to perform complete remote installations from a local server or workstation. Customize the settings on each individual server as required, or simply duplicate an existing configuration and deploy it to others. Either way, Network Associates\* puts the control in your hands.

### World's Best Virus Detection

- Certified 100% detection rate.
- AVERT( Anti-Virus Emergency Response Team) staffs 85+ virus researchers on five continents.
- Network Associates is the global leader in anti-virus solutions with over 60 million customers including 80% of the Fortune 1000 and over 50,000 organizations worldwide – protecting more desktop servers, and networks than all others combined.

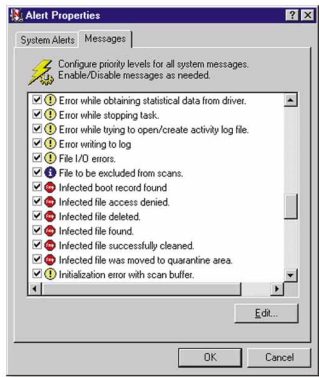

- Network Associates is the leading choice of corporate security experts as reported in the Computer Security Institute 1998 market survey.

Tested and approved with the following Novell Products:  
 NetWare (v 3.12)  
 NetWare (v3.2)  
 NetWare (v4.11)  
 NetWare 5

## Robust Administrator Alerting

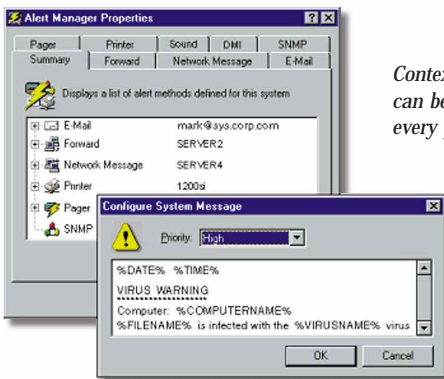

When an infected file is detected, Network Associates' flexible alerting features provide precise control over who is notified, and what message they receive. NetShield's powerful AlertManager feature allows administrators to activate and define any combination of system alerts, each of which can be selectively enabled and prioritized.

*NetShield offers a wide variety of alerting options giving you better control over potential virus outbreaks*

## Flexible Alert Management

NetShield also gives you unparalleled control over how alerts are delivered. Context sensitive virus alerts can be delivered by email, printer, pager, or network message. NetShield's optional SNMP alerting can also be used to automatically generate trouble tickets. Activity logs are recorded in local or remote NT Eventlogs and can also be isolated in a dedicated virus log.

*Context sensitive alerts can be customized to fit every possible scenario*

## Flexible Scanning Options

NetShield provides comprehensive protection for NetWare and Windows NT servers, capturing both known and new viruses before they infect multiple users.

Network Associates' award-winning engine combines the best of Dr Solomon and McAfee\* Total Virus Defense\* technologies to deliver high-speed scans of all files as they are accessed in real-time. All major file compression formats are supported. Detected viruses can be automatically cleaned, deleted, or even quarantined for future analysis and origin tracing.

NetShield also includes flexible on-demand and scheduled scanning capabilities. Administrators can configure any number of selective scan tasks to run at different intervals. A simple point-and-click Task Wizard makes the entire process a breeze.

*NetShield's Intuitive Task Wizard makes scheduled scanning a snap*

## Fast Efficient Virus Updates

Network Associates' groundbreaking Enterprise SecureCast technology ensures that your virus signature files and product versions are always the latest available. New updates are pushed directly to the administrator's desktop the moment they are released. Administrators can then easily distribute complete upgrades or updates enterprise-wide.

## System Requirements

### Administrator Console

- Windows 95 or NT
- Storage: 4 MB's

### NetWare Loadable Module

- NetWare 3.x, 4.x, 5
- Storage: 3 MB minimum

## About Network Associates

Total Virus Defense provides complete anti-virus protection at the desktop, file server, groupware server and Internet gateway. Powerful integrated distribution tools make it easy for administrators to deploy updates and upgrades, and to configure and monitor virus security enterprise-wide. Total Virus Defense is sold as a standalone suite and as part of Net Tools Secure, Network Associates' comprehensive security suite incorporating anti-virus, firewall, encryption, authentication, intrusion detection, vulnerability assessment, and security management.
