

# VirusScreen ASaP

## MANAGED E-MAIL SCANNING SERVICE

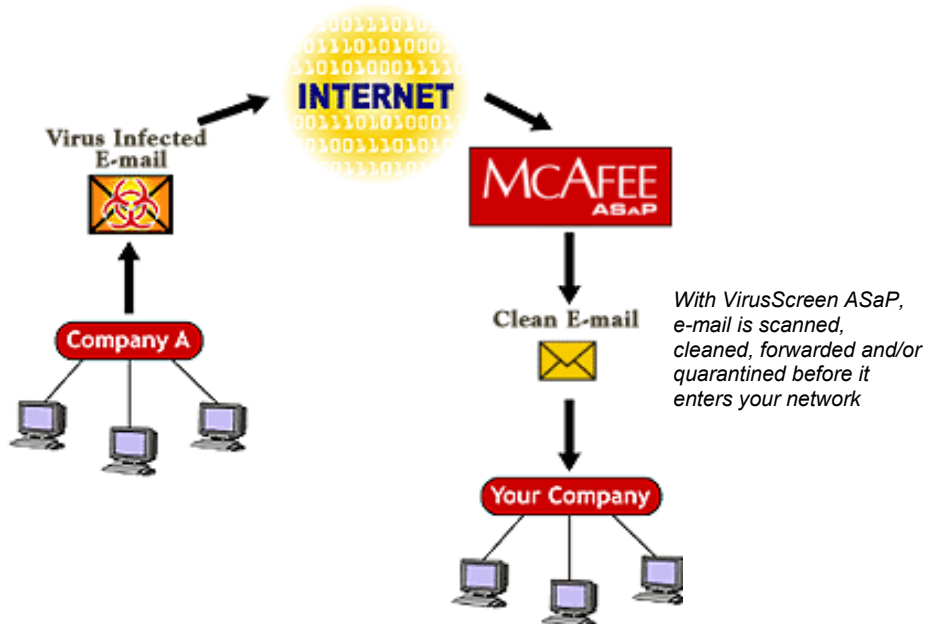

### Instantly Scan and Clean Virus-Infected Messages Before they Enter Your Network

Increased use of the Internet has resulted in exponential growth in the number of viruses detected annually. Today, nearly 87% of all viruses are spread via e-mail, and can affect your network as quickly as your employees can click. VirusScreen ASaP moves at the speed of the Internet, scanning and cleaning e-mails before they reach your gateway, and providing automatic and immediate virus updates round-the-clock.

E-mail borne viruses are responsible for several important networking issues, including: data deletion, bandwidth congestion and service infrastructure downtime. System downtime associated with resolving a virus outbreak can be quite significant. Without VirusScreen ASaP's immediate updates, system administrators must become aware of a virus and search for a solution manually, an unnecessarily slow process when time is critical. Now, within minutes, you can have an anti-virus (AV) solution to completely prevent malicious e-mail from entering your network. You will not need to buy any hardware or software, read any manuals or configure and update your systems. Most importantly, your e-mail will be cleaned by the worldwide leader in virus prevention and delivered to you, virus free.

### VirusScreen ASaP from McAfee

VirusScreen ASaP is a managed scanning service that addresses the most serious security issue affecting the enterprise today – virus infected e-mail. With your subscription, VirusScreen ASaP scans all e-mail before it reaches your gateway; thus, preventing e-mail borne viruses from penetrating the network. VirusScreen ASaP also scans outgoing mail to prevent your employees from transmitting infected messages.

### VirusScreen ASaP Highlights

- Screens e-mail before it enters your network, providing 100% virus detection and cleaning
- Proven WebShield Technology using McAfee AV engine
- The most comprehensive and updated virus DAT file in the marketplace – our systems are updated 24x7
- Backed by McAfee AVERT – the world's leading virus detection and research institute

### Managed and Reported by McAfee ASaP

- Quick and Easy Enrollment
- Web-based deployment, management, monitoring, configuration and E-Care support
- Centralized, 24x7 management and monitoring
- Carrier-grade infrastructure
- Comprehensive, Web-based reporting

### Secure, Reliable, Fast and Affordable

- McAfee ASaP is part of Network Associates – the world's leading network security organization
- Remotely managed by McAfee ASaP, worry-free and cost-effective
- Redirecting your mail to pass through VirusScreen ASaP creates less than a one second delay in e-mail transit
- Our Security Operations Center (SOC) provides round-the-clock monitoring and immediate response

## How VirusScreen ASaP Works

VirusScreen ASaP acts as a filter between the Internet and your network. Your existing mail system has a domain name server (DNS), which has an MX record mapping your e-mail address to your mail server. Typically, the MX record is configured to direct mail to your server. By redirecting your MX record to point to the VirusScreen ASaP scanners, all external mail will flow through the service, be screened for viruses and then sent on to your e-mail server, cleaned and safe. It's that simple.

## Completely Managed E-mail Security

Developed from proven McAfee anti-virus (AV) technology using Network Associates' award-winning virus screening engine, VirusScreen ASaP provides the best possible detection and cleaning in the marketplace. VirusScreen ASaP screens your streaming e-mail, and either cleans it or quarantines it to ensure that your company is not infected by today's malicious e-mail viruses. Unlike gateway or groupware-based virus scanners, which perform back-end scanning at a single location in your network, VirusScreen ASaP requires no hardware, software, maintenance, or technical expertise. By signing up for VirusScreen ASaP, your e-mail will be instantly scanned before you receive it into your mail server, virus-free. Infected files are quarantined in a secure area only your administrators can access – ensuring 100% privacy.

## Comprehensive, Web-based Reporting

VirusScreen ASaP surpasses traditional file logs with high-level and detailed performance reports that can be viewed and downloaded from your secure area on the McAfee ASaP Web site – 24 hours a day. With VirusScreen ASaP, you can view a variety of reports, from overall screening statistics to actual e-mails which have been caught and quarantined for administrator review. Your reports are kept on our servers, allowing you to access up-to-the-hour details on-the-fly. No waiting and no filtering through lengthy log files and generating reports. All the information you need is clearly displayed and interpreted in the easy-to-understand Web-based reports.

## Centralized Management and Monitoring

VirusScreen ASaP relieves you from the costs and operational issues associated with implementing a robust e-mail virus screening solution. From your initial registration, VirusScreen ASaP provides you with 24x7 centralized management and monitoring of your e-mail traffic. Our state-of-the-art Security Operations Center (SOC) includes staff specifically assigned to monitor and manage our client networks. We respond rapidly to any situation and offer Bronze, Silver, Gold and custom levels of service to meet your specific support needs. Our SOC is instantly updated as soon as new viruses are identified anywhere in the world – providing you constant protection from infected messages.

## Backed by AVERT, the Leading Anti-Virus Research Organization

VirusScreen ASaP is part of a completely managed AV solution from McAfee ASaP, including VirusScan ASaP – the world's first self-updating desktop anti-virus solution. All McAfee ASaP AV solutions are backed by McAfee AVERT (Anti-Virus Emergency Response Team), the top-ranked anti-virus research center in the world. With offices on five continents and over 150 researchers employed worldwide, McAfee AVERT identifies more viruses and provides the latest cures faster than from any other vendor.

## Managed Security from the Most Trusted Name in the Industry

As McAfee's parent company, Network Associates, Inc. (Nasdaq: NETA), with headquarters in Santa Clara, Calif., is the world's largest independent network security and management software company, and the eighth largest independent software company overall. Network Associates is the culmination of best-of-breed technologies from the world's leading software developers. These leading brands are used by Network Associates' more than 70 million customers around the globe and include McAfee anti-virus, PGP encryption, Gauntlet firewall, Magic help desk applications and the Sniffer family of network analyzers.
