

PGP Global Enterprise Management System

PGP Security, Protecting Your Privacy

Enhancing Global Firewall and VPN Deployment, Administration, and Management

The Global Enterprise Management System (GEMS) streamlines deployment, administration, and management of multiple Gauntlet firewalls and virtual private networks (VPNs) dispersed locally or globally. GEMS is a secure, multidimensional, point-and-click Java-based application that manages firewalls and VPNs from a variety of systems including Windows 98, Windows NT/2000, and UNIX operating systems. GEMS uses 3DES encryption to ensure the security of information as it travels between the firewall and GEMS.

Through its built-in extensibility, GEMS gives you the power to centrally manage as many as 500 geographically dispersed firewalls and VPNs—all from a single console. Its unique management approach lets you customize logging and storage in a manner that's most meaningful to your business. You can archive all or a portion of logs to a central repository, as well as log specific firewall and VPN log activity locally.

GEMS manages as many as 500 Gauntlet Firewalls and VPNs from a single console.

Features & Benefits

- Object-based substitution lets you create rules once and apply them across your entire enterprise or only upon select firewalls, giving you maximum flexibility with centralized management control.
- The consolidated firewall view allows you to see multiple firewall configurations from a single screen.
- Out-of-the box report templates make it easy to display and analyze firewall/VPN data at-a-glance.
- Multilevel administration privileges separate enterprise-level management tasks from firewall-specific management tasks to ensure local and global security policy control.
- Powerful deployment capabilities streamline software updates distribution. Create and manage an enterprise-wide VPN between multiple sites using only a single rule.

Flexibility, Power, Control

Managing numerous firewalls individually is not only time consuming, but complex. Each firewall has its own distinct rules and policies governing traffic handling between connected networks. GEMS solves this problem with a technique called "substitution." Substitution works in tandem with the GEMS global enterprise rule pool feature to enable generic, centrally managed rules that govern protocols across multiple firewalls.

By simplifying rule management, the GEMS design gives you the power to set the policies that control your enterprise-wide firewall system—and then implement the rules from one location.

Out-of-the-box PGP report templates make it easy to display and analyze firewall and VPN data at-a-glance. Either way, you now can view the information you want, when you want it—for your entire enterprise—all based on the Seagate Crystal reporting platform, a popular application, which produces robust reports for quick analysis of logged firewall and VPN data.

Multilevel Administration

GEMS lets you separate enterprise-level tasks and firewall-specific level tasks.

You can allow one user class to manage the enterprise firewall/VPN system, while another manages individual, specific firewalls and VPNs. Additionally, you can use GEMS' powerful deployment capabilities to distribute anti-virus DAT updates, CyberPatrol updates, software patches, perform backup and restore, and reboot actions—all on an enterprise-wide or selective basis to your firewalls and VPNs anywhere in the world.

Server Platforms Supported:

- Sun Solaris 8
- 32-bit operating system
- HP-UX 11.0
- 64-bit operating system

GEMS GUI Platforms Supported:

- For Windows NT 4.0/98/2000
- 64 MB RAM minimum
- 500 MB of free disk space
- CD-ROM
- For Sun Solaris:
 - 256 MB RAM minimum
 - 9 GB of free disk space
 - CD-ROM
- For HP-UX:
 - 512 MB RAM minimum
 - 9 GB of free disk space
 - CD-ROM

PGP Security Products

PGP Security, a Network Associates Company, protects your privacy through a full range of security products: Gauntlet Firewall, PGP Corporate Desktop Privacy Products, PGPwireless, CyberCop Scanner, E-Business Server, PGP Firewall and VPN e-ppliances.

For more information on products, worldwide services, and support, contact your authorized PGP Security sales representative or visit us at:
